INDUSTRIAL ACCIDENT STATISTICS, QUEENSLAND, JUNE QUARTER 1968 AND  
YEAR ENDED 30 JUNE 1968

Details of industrial accidents given in this bulletin were extracted from claims for workers' compensation finalised or becoming three years old during the periods covered. They do not refer to accidents actually occurring within these periods.

In these statistics the objective has been not only to meet the requirements of the Division of Occupational Safety of the State Department of Labour and Tourism, but also to conform to standards set by the International Labour Organisation for the international comparison of industrial accident statistics.

Tables 1 to 4 comprise standard analyses of work injuries relating to the June quarter while Tables 6 to 9 relate to the whole year 1967-68. Table 5 sets out the quarterly variations over the fifteen months ended 30 June 1968, but it should be realised that, in view of the definitions in the first paragraph above, these variations cannot be regarded as reliable measures of seasonal fluctuations in occurrences.

For the year ended 30 June 1968, out of 42,967 work injuries, 39,621, or 92.2 per cent, were to males, and 3,346, or 7.8 per cent, to females. 41,960, or 97.6 per cent of all injuries, were of a temporary nature, and 929, or 2.2 per cent, resulted in permanent disabilities, while 78, or 0.2 per cent, were fatal (all males).

In the year 1967-68, 725,624 calendar days were lost through temporary disabilities by males and 60,518 by females. Male employees lost an average of 18.8 days, and 39.3 per cent of absences did not exceed one week's duration. The average number of days lost by female employees through temporary disabilities was 18.3 and 39.1 per cent of their absences did not exceed one week's duration.

Of the male occupation groups listed in Table 7, Metal Tradesmen and Process Workers suffered most injuries (8,509, or 21.5 per cent). In the female grouping, more accidents (940, or 28.1 per cent of the total) happened to Service Industry and Recreation Workers than to any other group.

The most common agents precipitating these accidents were Hand Tools and Movable Equipment which resulted in 9,146, or 21.3 per cent, of work injuries (Table 8). The most common type of accident (being struck by moving or falling objects) accounted for 19,818 injuries, or 46.1 per cent of the total. This percentage was noticeably higher for Food and Beverage Workers (Table 7).

Lacerations and open wounds (12,019 cases) and sprains and strains (11,319 cases) were the two most common injuries suffered. Internal injuries caused 30 of the 78 fatalities.

More detailed statistics are available quarterly and annually and may be had on request. Explanatory Notes relating to these statistics appear in bulletins Nos.53 and 67 of 1968.
